

# Global Settings

## Introduction

The settings module is a user management software tool that includes configurations for network settings, language switching, log export, and version updates.

## Switch Languages

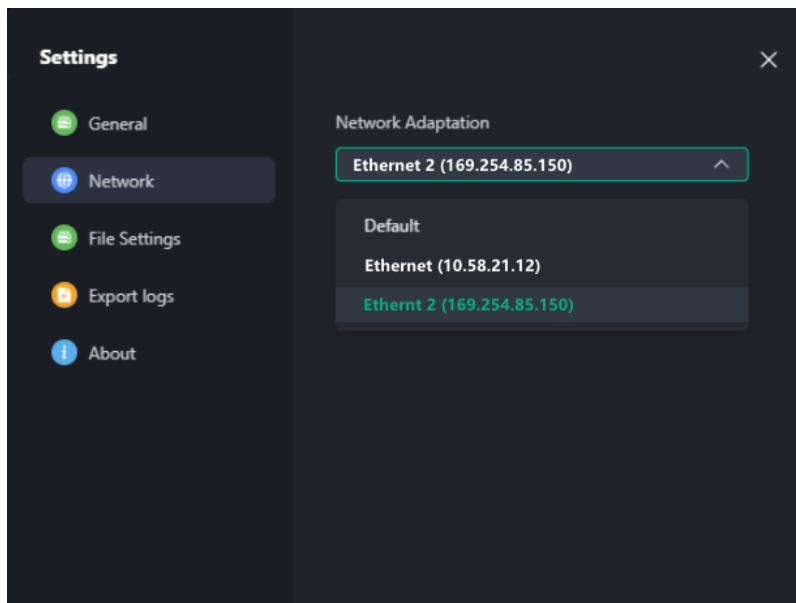

1. Click  in the upper right corner of Designer and select **General** to enter the settings interface.
2. Select the desired language from the drop-down menu.

## Select a LAN Adapter

Configure the network where the Designer is located. To configure devices, they must be on the same local area network (LAN).

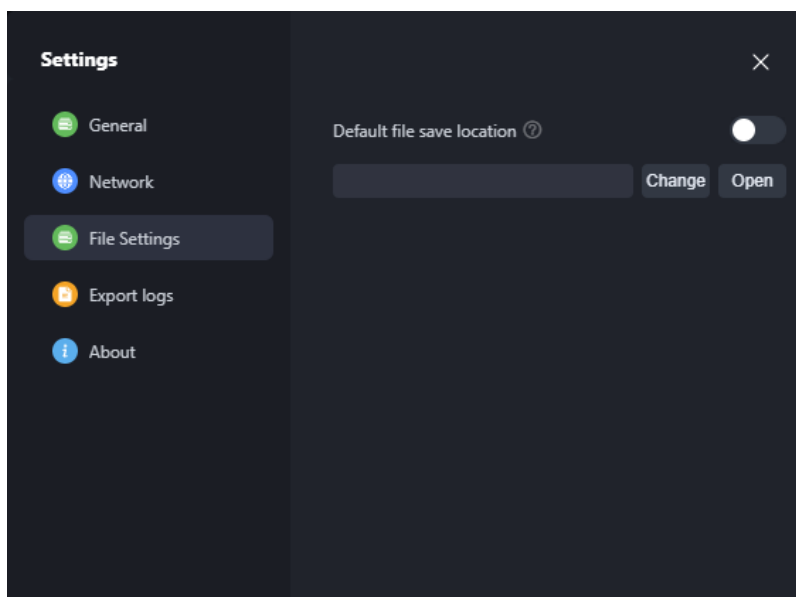

1. Click  in the upper right corner of Designer and select **Network** to enter the settings interface.
2. Select the LAN adapter from the drop-down menu.

## Set File Settings

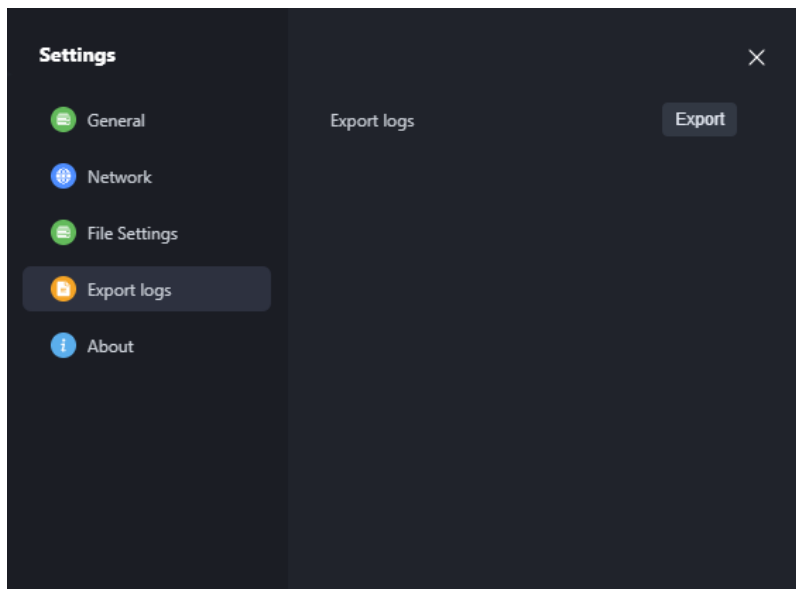

If this setting is enabled, generated room files will be automatically saved to the specified location; if disabled, generated room files will require manual selection of a save location.

1. Click  in the upper right corner of Designer and select **File Settings** to enter the settings interface.
2. Enable **Default file save location** and set the location.

## Export Software Logs

1. Click  in the upper right corner of Designer and select **Export Log** to enter the settings interface.
2. Click **Export**.

## Check the Software Version, User Agreement, and Privacy Policy

1. Click  in the upper right corner of Designer and select **About** to enter the settings interface.
2. You can see the software version, user agreement, and privacy policy. If the software is not the latest version, a prompt will appear indicating that a new version is available, and you can click directly to upgrade.
