

SmartVision 80 Deployment

The deployment height range for SmartVision 80 is 1.2m-2.2m.

Adjusting Installation Height

Installation Above the TV

If deploying SmartVision 80 at the front of the meeting room (above the TV), the installation height must be less than the straight-line distance from the camera to the nearest participant.

Installation Below the TV

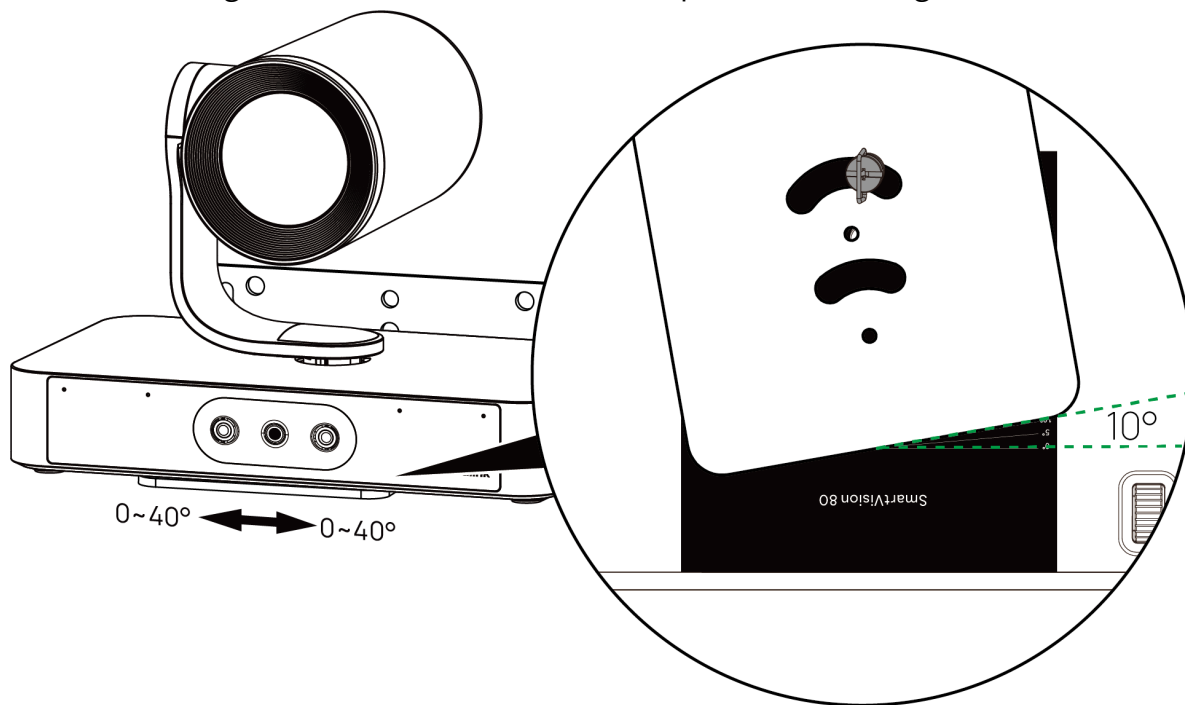

With the lens facing upwards, the recommended installation height is 800mm. Adjust the lens angle to ensure coverage of the desired area.

Wall Mount Installation

With the lens facing downwards, the recommended installation height is below 2.2 meters to ensure the camera can cover the height range of 60cm-210cm.

Adjusting Lens Angle

The default angle is 0°, and it can be rotated up to 40° left or right as needed.

Notes After Installation

- Ensure the device is installed stably to avoid vibration affecting the view.
- Regularly check the device status to ensure normal operation.
